MUEMUE HOME, S.L.

DIRECCION POLIGONO INDUSTRIAL LA VILA CALLE RIBERA 7 46819, NOVETLE, VALENCIA SPAIN

Sample Description : BUNK BED
 Style No. : MU0405-L
 Client Reference Information : CF1052
 Country of Origin : CHINA
 Country of Destination : SPAIN

As above test item and its relevant information regarding to the submission are provided and confirmed by the applicant. SGS is not liable to either the test item or its relevant information, in terms of the accuracy, suitability, reliability or/and integrity accordingly.

Sample Receiving Date : MAY 21, 2024
 Sample Resubmission Date : JUN 06, 2024
 Test Performing Date : MAY 21, 2024 to JUN 27, 2024
 Test Performed : Selected test(s) as requested by applicant

Test Result Summary

Test Conducted: UNE-EN 747-1:2012+A1:2015 Furniture - Bunk beds and high beds - Part 1: Safety, strength and durability requirements
UNE-EN 747-2:2012+A1:2015 Furniture - Bunk beds and high beds - Part 2: Test methods

Test Result:

Clause	Test Item/ Requirement	Result
4	Safety requirements	/
4.1	Construction	/
4.1.1	<p>General Accessible edges and corners shall be rounded or chamfered and free from burrs or sharp edges. There shall be no open ended tubes. All assembly and pilot holes shall be made by the manufacturer. Vertically protruding parts on the top of the upper bed shall either:</p> <ul style="list-style-type: none"> a) have an uninterrupted minimum horizontal dimension of 300 mm without any other vertical protrusion, or b) have an uninterrupted vertical dimension of at least 600 mm measured from the highest adjacent part, or c) where the largest dimension is 50 mm or more, have a maximum height at which a line, drawn at 45° touches it, of not more than 5 mm above at least one adjacent/adjoining horizontal component; the maximum vertical protrusion above that component shall not exceed 20 % of the largest horizontal dimension of parts, or d) where the largest dimension is less than 50 mm, have a maximum height at which a line, drawn at 45° touches it, of not more than 5 mm above at least one adjacent/adjoining horizontal component; the maximum vertical protrusion above that component shall not exceed 10 mm of parts. <p>It shall not be possible to dismantle the bed or its components without the use of a tool. The dimensional requirements apply both before and after testing without re-tightening.</p>	PASS
4.1.2	Accessible holes gaps and openings	/
4.1.2.1	<p>General There shall be no accessible holes, gaps or openings with a diameter/width greater than 7 mm and less than 12 mm, unless the depth is less than 10 mm when tested according to 5.3 of UNE-EN 747-2:2012+A1:2015. Additionally, accessible holes, gaps and openings in safety barriers, bed bases and treads, shall fulfil the requirements specified in the respective clauses, i.e. 4.1.3 Bed base(s), 4.1.4 Safety barriers and 4.1.5 Ladder or other means of access. All other accessible holes, gaps or openings shall be either:</p> <ul style="list-style-type: none"> a) at least 12 mm but not more than 25 mm, when tested in accordance with 5.3 of UNE-EN 747-2:2012+A1:2015; or b) at least 60 mm but not more than 75 mm, when tested in accordance with 5.3 of UNE-EN 747-2:2012+A1:2015; or c) at least 200 mm. 	PASS

Clause	Test Item/ Requirement	Result
4.1.2.2	<p>Head entrapment on the outside of the bunk bed/high bed The following requirements apply only to openings, where the lowest part is ≥ 600 mm from the floor. Partially bound, V and irregular shaped openings shall be constructed:</p> <p>a) portion B of the template shall not enter the opening to the full thickness of the template when tested in accordance with 5.3.2 of UNE-EN 747-2:2012+A1:2015; or b) the apex of portion A of the template shall contact the base of the opening when tested in accordance with 5.3.2 of UNE-EN 747-2:2012+A1:2015.</p>	NA
4.1.3	<p>Bed base(s) The bed shall have a means (e.g. fastening) of preventing the side rails from bending outwards. This requirement is fulfilled if the bed base(s) or its elements do not fall down when tested with the horizontal outwards force specified in 5.4.2 of UNE-EN 747-2:2012+A1:2015. All gaps between the bed base and the side or ends shall not exceed 25 mm when measured in accordance with 5.3 of UNE-EN 747-2:2012+A1:2015. All gaps between bed base components, (e.g. slats or springs) shall not exceed 75 mm when measured in accordance with 5.3 of UNE-EN 747-2:2012+A1:2015. When tested in accordance with 5.4.3, 5.4.5 and 5.4.4 of UNE-EN 747-2:2012+A1:2015, the bed base and/or its elements shall not break, fall down or become detached. The distance between the upper surface of the lower bed base and the underside of the upper bed base shall be at least 750 mm. The bed base shall allow ventilation. This requirement is fulfilled if there is a minimum ventilation area of 35 cm² (e.g. 8 holes with a diameter of 24 mm in a solid bed base, gaps between slats). The openings shall fulfil the requirements in 4.1.2.</p>	PASS
4.1.4	<p>Safety barriers Any upper bunk bed or high bed shall be equipped with continuous safety barriers all around the bed, with the exception of an opening for access, which shall be located on one long side only. Gaps between the ends of the safety barrier and the bed end structures shall not exceed 7 mm, when tested according to 5.3 of UNE-EN 747-2:2012+A1:2015. In non-domestic use only, the structure of the building can act as a safety barrier, provided that the bed is fastened to it in accordance with the manufacturer's instructions. The safety barriers shall be secured against unintentional loosening. This requirement is fulfilled if the safety barriers do not become damaged or loosened when tested in accordance with 5.4.2 of UNE-EN 747-2:2012+A1:2015. The distance between the upper edge of the safety barriers and the upper surface of the bed base shall be at least 260 mm. The top of the mattress shall be at least 160 mm below the upper edge of the safety barriers. The maximum thickness of the mattress shall be permanently marked. With the exception of the upper corners of the safety barrier, which may end in a maximum radius of 85 mm, the opening for access shall have a width between 300 mm and 400 mm from the maximum mattress thickness mark to 160 mm above it. With the exception of the long side, where the ladder or other means of access shall be mounted, the horizontal distance between the outside of the top safety barrier and the vertical projection of the outermost point of the legs/posts/panels, shall not exceed 55 mm or shall be more than 230 mm. With the exception of the opening for access, the safety barrier shall be designed so that in at least one direction the clear space between two adjacent retaining elements</p>	PASS

Clause	Test Item/ Requirement	Result
	(e.g. bands, filler bars) is either ≤ 5 mm or is at least 60 mm and not more than 75 mm when tested in accordance with 5.3 of UNE-EN 747-2:2012+A1:2015.	
4.1.5	<p>Ladder or other means of access The ladder or other means of access shall be either vertical or shall have a positive inclination towards the upper bed. The distance from the floor to the upper surface of the first tread shall not exceed 400 mm. The distance between the upper surfaces of two successive treads shall be (250 ± 50) mm. The distance between the upper surfaces of the treads shall be equal with a tolerance of ± 5 mm. The distance between the top tread and the point of access shall not be more than 500 mm.</p> <p>The clear distance between two successive treads shall be at least 200 mm. The usable width of the treads shall be at least 300 mm. The front edges of all treads shall lie on a straight line within ± 20 mm. The gap between any tread and any part of the bed frame shall be: a) less than 7 mm; or b) at least 12 mm but not more than 25 mm; or c) at least 60 mm but not more than 75 mm; or d) at least 200 mm. The effective step depth shall be at least 90 mm. Frame parts of the bed, situated in the vicinity of treads, shall not interfere with the usable area of the tread.</p>	PASS
4.2	<p>Strength of ladder or other means of access: Attachment, deflection and strength The bed shall be provided with a means of access which shall not break, become detached or deform permanently by more than 5 mm when tested in accordance with 5.6 of UNE-EN 747-2:2012+A1:2015.</p>	PASS
4.3	<p>Strength of frame and fastenings The frame and structural fastenings shall not be damaged or malfunction; nor shall any part detach when tested in accordance with 5.4.2 and 5.5 of UNE-EN 747-2:2012+A1:2015.</p>	PASS
4.4	<p>Stability When tested in accordance with 5.7 of UNE-EN 747-2:2012+A1:2015, the bed shall not overturn. This test does not apply to bunk beds and high beds that are intended to be fixed to the structure of the building. This test shall be carried out without mattress(es). Position the sample on the floor with the legs against stops. The tilting tendencies shall not be restrained. Apply by a horizontal force of 120 N at those points most likely to cause overturning.</p>	PASS
4.5	<p>Fastening of the upper bed to the lower bed The upper bed shall be connected to the lower bed in such a manner that it does not disconnect when tested in accordance with 5.8 of UNE-EN 747-2:2012+A1:2015.</p>	PASS
